Imagine: Façades and Deflateables

Imagine is a series of publications that investigates technology and material development to provide architects and designers with ideas for their design. The team of authors develops new possibilities for materials, constructions and façades by employing alternative or new technologies, or ones that might not yet be developed but merely mentioned as ideas for the future. The series will cover topics geared toward technical developments, environmental needs and aesthetic possibilities.

The results are documented in sketches, pictures and mock-ups with explanatory texts as well as links for future research, describing the underlying principles and technologies – to inspire the reader to imagine!

010 Publishers plans to issue two volumes of the Imagine series annually. *Façades* and *Deflateables* appeared in May 2008. *Performance-driven Envelopes* and *Rapids* will appear at the beginning of 2009.

Would you like to be kept up to date with the publication of the new volumes? If so, please send an email to 010@010.nl.
